Q1. Operators in Python

ANSWER

operators are addition(+), subtraction(-), multiplication(*), division(/), modulus(%) and power(**). These are used to perform particular operations for example:

```
a=1
b=2
c = a+b
output:
c = 3
```

Q2. Operators

ANSWER

(/) shows the float value of quotient.
(//) shows integer value of the quotient (round off).
(%) shows the remainder value.
(**) shows the power of the number.
example:
5/2 = 2.5
5//2 = 2
5%2 = 1
5**2 = 25

Q3. for and while loop

ANSWER

for loop works on the variable with a specific function\statement like range()..
while loop consist only of the statement and need to increment the variable inside the loop.
but for loop consist of the statement and no need for the increment function.

Q4. range()

ANSWER

Range in for loop acts as the increment function. It covers every values within the given range.
range(5) = 12345
range(1,6) = 12345
range(1,10,2) = 13579

Q5. String

ANSWER

Strings are the group of characters that are present in a particular sentence.
They are specified within the cotes.
String is immutable, because the characters cannot be transferred from one place to another.

Q6. String Slice

ANSWER

```
s[1:5] = ytho
s[::-1] = nohtyP
s[::2] = Pto
s[-3:] = htyP
```

Q7. List

ANSWER

list is the collection of all the data. It is similar to that of structure.
Even arrays can be obtained from the list.

Q8. List Slice

ANSWER

```
L[2:6] = 30 40 50 60
L[4] = 10 20 30 40
L[::2] = 10 30 50 70
L[::-1] = 70 60 50 40 30 20 10
L[-4:-1] = 40 50 60
```
