Q1. Intelligent Customer Feedback Analysis

CODE

```
def clean(s):
    return s.lower().strip().replace(".", "").replace(",", "").replace("!", "")
def check(s):
    p=n=0
    for w in clean(s).split():
        if w in ["good", "great", "excellent", "love"]:
            p+=1
        elif w in ["bad", "poor", "worst", "hate"]:
            n+=1
    if p>n:
        print ("positive")
    elif n>p:
        print ("negative")
    else:
        print ("neutral")
for i in range(int(input())):
    check(input())
```

INPUT

```
2
good product! i love it.
worst service.
```

OUTPUT

```
positive
negative
```

Q2. Comprehensive Password Strength Checker

CODE

```
def check(p):
    u=I=d=s=0
    for i in p:
        if i.isupper():
            u = 1
        elif i.islower():
            I = 1
        elif i.isdigit():
            d = 1
        else:
            s = 1
    c = u + I + d + s
    if len(p)<6:
        print ("weak")
    elif c==4:
        print ("very strong")
    elif c==3:
        print ("strong")
    else:
        print ("moderate")
check(input())
```

INPUT

```
Abc@123
```

OUTPUT

```
very strong
```

Q3. Structured Server Log Error Analyser**CODE**

```
def check():
    n = int(input())
    a = []
    for i in range(n):
        s = input()
        if "error" in s.lower() and s not in a:
            a.append(s)
    print ("Errors:", len(a))
    for i in a:
        print(i)
check()
```

INPUT

```
4
INFO Login
ERROR Disk Full
Error Disk Full
WARNING Low Battery
```

OUTPUT

```
Errors: 2
ERROR Disk Full
Error Disk Full
```

Q4. Email Domain Frequency Analyser**CODE**

```
def check():
    d = {}
    for i in range(int(input())):
        s = input()
        if "@" in s:
            x = s.split("@")[1]
            d[x] = d.get(x, 0) + 1
    m = max(d, key=d.get)
    print(m, d[m])
check()
```

INPUT

```
5
a@gmail.com
b@yahoo.com
c@gmail.com
d@gmail.com
e@yahoo.com
```

OUTPUT

```
gmail.com 3
```
